PROFILE

Passionate about front-end web development, **eager** to bring creativity and technical skills to your dynamic work environment. With a **solid foundation** in **AI**, **problem solving skills**, crafting user-friendly interfaces, and a keen eye for design details, I'm **excited** to contribute to your projects. Let's team up to turn coding aspirations into tangible web wonders!

EMPLOYMENT HISTORY

Full-Stack Web Developer

Jan 2026 - Feb 2026

Freelance

- I collaborated closely with the development team to transform Figma board designs into a fully functional AI-powered football prediction and match highlights platform using React and Next.js. This included translating UI/UX concepts into responsive, high-performance interfaces while ensuring seamless functionality, modern design consistency, and an engaging user experience across devices.
- I demonstrated strong visual creativity by designing a stylish, modern landing page and an intuitive sign-in/sign-up modal with seamless navigation. I also enhanced the overall user experience by presenting prediction results in a clean, structured, and easy-to-understand interface, ensuring users could quickly interpret insights and navigate the platform effortlessly.
- I engineered and implemented the core application logic, including dynamic routing, secure user signup/login, authentication guards, usage tracking, and a premium upgrade modal to drive conversions. By integrating premium APIs from Anthropic and API-Football, I built an intelligent prediction system that processes over 10 years of football data and leverages Claude AI to generate highly probable match outcomes, giving users data-driven insights to consider.
- Implemented version control using Git and GitHub, sharing contributions with the team for approval. Applied sound coding practices and problem-solving skills to refactor the codebase, resulting in a more efficient caching system, faster loading times, and an optimized homepage.

Full Stack AI Engineer

March 2026

Freelance

- Designed and developed a fully functional investment platform as a client project using React and Next.js, transforming business requirements into a responsive, high-performance web application with a sleek landing page, intuitive sign-in/sign-up flow, and a modern user experience optimized for desktop and mobile devices.
- Engineered the core full-stack application logic, including dynamic routing, secure authentication, access control, transaction tracking, premium upgrade flows, and integrations with payment gateways and live market data APIs to deliver real-time portfolio updates, performance insights, and data-driven recommendations.
- Leveraged AI coding tools throughout the development lifecycle to accelerate implementation, generate and refactor code, debug issues, and optimize workflows. Combined with Git/GitHub version control and strong problem-solving skills, this resulted in a scalable, maintainable codebase with faster load times, improved caching efficiency, and an enhanced overall user experience.

Personal Projects

Aug 2022 – Present

- **Ebook landing page (<https://business.aceygram.xyz/>):** Used vanilla JavaScript, HTML, and CSS, while integrating a reliable payment system and automation to handle order and deliver the digital product to customers.
- **Blog Platform (<https://www.tone-elizabeth.blog/>):** Built a responsive blog using HTML, CSS, and JavaScript, with dynamic post rendering, clean UI, and a simple content structure for easy publishing and management.
- **Portfolio web app:** Built a responsive portfolio using React and Next.js, featuring smooth navigation, optimized performance, and dynamic project sections, and deployed it on Vercel for fast, reliable hosting.
- **Restaurant App (<https://aceygram.github.io/Project-Restaurant-Page/>):** Created a dynamic restaurant page with vanilla JS, populating the DOM with content.
- **Tic Tac Toe Game (<https://aceygram.github.io/Project-Tic-Tac-Toe/>):** Implemented game logic for Tic Tac Toe using vanilla JS, incorporating Min-Max Algorithm for AI player.

EDUCATION

West African Senior Secondary School Certificate,
International Secondary School, UST
Jun 2013

PortHarcourt

Bachelor of Science, Nnamdi Azikiwe University
Sept 2020

Awka

Attained a Bsc. in Geology, showcasing a solid foundation in earth sciences and geological principles. Completed specialized coursework in mineralogy, petrology, and geological mapping, cultivating expertise in those areas.

Full Stack Web Development, The Odin Project
Jun 2022 - Jun 2024

Online

Acquired Full Stack Web Development proficiency through The Odin Project, completing a hands-on curriculum in HTML, CSS, JavaScript, and more. Applied skills in real-world projects, demonstrating a practical understanding of web development, and eager to contribute effectively in dynamic software environments.

LEADERSHIP AND ACTIVITIES

Participated in a Joint Project during a Twitter Hackathon
Aug 2023 – Sept 2023

Online

- Front-end web developer in a dynamic joint project during a Twitter Hackathon.
- Utilized Figma for rapid design and prototyping to address the challenge of creating a gym website, ensuring seamless integration of design and functionality through collaboration.
- Contributed to a cross-functional team focused on delivering creative solutions for the gym website, aiming for a compelling user experience.
- Enhanced ability to thrive in fast-paced, collaborative environments and strengthened real-time problem-solving skills, meeting tight deadlines.

Community Leader
june 2023 Present

Port Harcourt

- Created a local group to help Educate, Support and bring resources to our Development Community.
- Lead hands on workshops in JavaScript, Figma, CSS and HTML, bringing technology experts to help in educating our community.
- Created a comfortable and inclusive environment for developers regardless of skill level.
